

# JPL3 NON-FLIP METHOD

I was asked the other day if there is a speed weaving method for this weave.....I wish it were so but I have never found one. I know of the flip method where you insert and close your ring and then rotate the weave around to insert your other ring. To me this is a nice way to do it but a little more time consuming.

I have also used the method below to make JPL3 and find it (for me) slightly faster to do. It starts with setting up your Mobius in the right orientation. This is the key in my mind to making this method work.

1. Orientate the right as in the picture below and be ready to insert your 4<sup>th</sup> ring where the yellow arrow indicates.

2. Place your 4<sup>th</sup> ring so.....

3. Close the ring and look at your weave. You need to insert your 5<sup>th</sup> ring where the yellow dot is located.

4. Keep doing this until you have gotten the desired length you wish.
